

Required Inspections for Residential Interior Remodeling

Inspections indicated outlines the scope of required inspections based on the plan review results and your type of permit:

INTERIOR REMODELING (RESIDENTIAL)

- Rough framing (If framing is within the scope of the project and /or If window replacement is within the scope windows U-factor and any required tempered glazing will be inspected at this time).
- Rough electrical (If electrical is within the scope of the project).
- Rough HVAC (If HVAC is within the scope of the project, relocation of ducts only does not require an inspection).
- Rough plumbing (If plumbing work is within the scope of the project).
- Draft stop and fire stop (Which can be inspected at the time of rough framing, rough electrical, rough HVAC, and rough plumbing). **THIS INSPECTION IS NOT REQUIRED IF FRAMING IS NON- COMBUSTIBLE MATERIAL (steel framing).**
- HVAC duct insulation (if installation of new supply and / or return ducts are within the scope of the project).
- Insulation inspection (If exterior wall covering and / or any ceiling covering have been removed within the scope of the work).
- Final inspection (Certificate of Occupancy)
